

# THE FUTURE OF CONNECTED LINE LOCATING

It is estimated that \$30 billion are wasted each year due to direct or indirect damage to buried utility lines.

Honeywell's line locating service across gas, electric and water brings you best-in-class technology and helps eliminate risky guess work.

This cost saving service provides a one and done solution so you don't have to send a tech out to the same location again.

## Groundbreaking Technology

### OLD WAY

Call a technician

Technician tries to identify the utility line by spray painting marks on a yard

The technician doesn't provide a high-level of confidence in the accuracy being three feet from the line

An inaccurate decision can have serious consequences

If there is another issue, a call needs to be made and a technician comes back

### OUR WAY

Call a technician

Technician comes out and provides the line locating service

Using GPS coordinates, a technician uploads a digital map to the cloud

Accuracy within inches

If there is another issue, a digital map can be sent rather than a technician coming out
