

HOW CONTACTLESS BILL OF LADINGS ARE KEEPING TODAY'S LOGISTICS SAFE

In today's challenging business environment, logistics companies, their customers, and end consumers are looking to supply chain analytics for real time digitized order tracking from origin to Bill of Lading.

SITUATION

In the logistics segment, Bill of Lading (BOL) is a significant part of the delivery process. It establishes proof that the package has been delivered and acts as a receipt. However, recent safety protocols have required traditional BOL data captures for both commercial products and essential goods to become contactless and more reliant on easily integrated Transportation Management Systems (TMS) for Electronic Bill of Ladings.¹

Logistics providers, customers and consumers are reluctant to sign BOL documents via tablets or paperwork due to fears of cross contact contamination. It should also be mentioned that there are ramifications associated with claims for short or non-delivery of goods, non-payment, or even failure to deliver contractual obligations.²

In this scenario, let's discover how Honeywell is well suited to help large-scale logistics firms automate the paper ticket process.

SCENARIO

Before

Logistics firms typically use paper BOLs to process orders during weekly deliveries.

The Challenge

This process results in a slow aggregate, error prone manual data entry, that also requires multiple physical contacts throughout the shift making it difficult to adhere to safety protocols.

The Solution

Honeywell's ruggedized CT60 Mobile Computer in partnership with Vector's industry-leading data capture software solution is being used to replace paper BOLs with contactless electronic BOLs.

The Honeywell offering results in 100% real-time BOL accuracy and a faster digitized process, that eliminates contact and increases customer safety across shippers, carriers, and receivers. By streamlining 70k+ loads through one device, logistics firms can increase cash flow up to 76%. Savings that have been realized can be re-invested into increasing the fleet size.³
