MASKS PRODUCED IN 2020

DUAL-LAYER FACE COVER

We developed our Dual-Layer Face Cover as a durable, high-quality, reusable face cover able to withstand dozens of reuses. It's flexible to fit most faces and holds its shape with good filtration and breathability.

The insert has been shown by a third-party testing facility to block up to 97% of 3-micron-sized non-viable particles and 0.1-micron-sized aerosolized particles. Our dual-layer face cover is five times more filtration efficient than a DIY face cover and can last for more than 50 reuses.

*The insert has been shown by a third-party testing facility to block up to 97% of 3-micron-sized non-viable particles and 0.1-micron-sized aerosolized particles

WARNING: The Face Mask is authorized for emergency use as source control. Source control refers to the use of a face mask over the mouth and nose to contain that individual's respiratory secretions to help prevent transmission from infected individuals who may or may not have symptoms of COVID-19. The face mask is intended to be used with single-use inserts. There has not been testing of the effectiveness of the disposable insert when placed in the mask. Accordingly, this product is not a respiratory protective device, nor a substitute for filtering face piece respirators or for surgical face masks. This product is not for medical use or for use in a high infection risk clinical setting. It is not intended to be used to provide liquid barrier protection or for high-risk aerosol generating procedures. This product has not been tested against COVID-19. NOT FDA APPROVED.

Features of the dual-layer face cover include:

- Adjustable ear straps
- Flexible noseclip
- Breathable outer layer
- Replacable protective inserts
- Durable structure

HONEYWELL THERMOREBELLION™

Honeywell ThermoRebellion™ detects elevated skin temperature in single individuals. The device's non-contact nature also mitigates risk of cross-contamination. A thermal image of the individual is used to determine skin temperature by focusing on facial features such as the inner canthi of the eye.

This detection system can be deployed at the entryway of your office building to identify whether personnel exhibit an elevated skin temperature. Once identified, a secondary screening process can be administered to those whose temperature exceeds the operator's threshold.

SAFETY PACK

Our Safety Pack gives you the personal protective equipment your employees and customers need in a day-to-day setting. Ideal for visitors or on-the-go use, these are an effective tool for helping to protect everyone in the organization, from your warehouse to your executive offices.

Additionally, Honeywell Safety Packs are co-brandable, with the ability to put your stamp on each one with your own logo, colors and branding.

Each safety pack includes the following:

- 1 Face Mask
- 1 Pair of Gloves
- 2 Wipes

DISPOSABLE FACE SHIELD

For a wide range of workers, face shields provide an extra layer of protection, and it's essential to ensure a high-quality, comfortable face shield that can perform in any workplace.

Our Disposable Face Shields are FDA registered and have been tested according to industrial PPE regulations for droplet face shields.

Features of the disposable face shield include:

- Large coverage
- Adjustable elastic band
- 1.2" foam thickness
- Anti-fog coating
