DUAL-LAYER FACE COVER

We developed the Dual-Layer Face Cover as a durable, high-quality, reusable face cover able to withstand multiple washes.

This face cover, when used with a disposable insert*, provides the wearer with an extra layer of mouth and nose coverage beyond a common cloth face covering. The 4-way stretch combined with adjustable ear loops and nose clip minimizes gaps and enhances overall comfort, while the contoured design allows the cover to stand off the face and enhance breathability.

*The insert has been shown by a third-party testing facility to block up to 97% of 3-micron-sized non-viable particles and 0.1-micron-sized aerosolized particles

WARNING: The product has not been FDA cleared or approved. The product has been authorized by FDA under an EUA for use as source control by the general public as well as by HCP in healthcare settings as to help prevent the spread of infection or illness during the COVID-19 pandemic. Source control refers to the use of a face mask over the mouth and nose to contain that individual's respiratory secretions to help prevent transmission from infected individuals who may or may not have symptoms of COVID-19. This product is authorized only for the duration of the declaration that circumstances exist justifying the authorization of the emergency use of medical devices, including alternative products used as medical devices, during the COVID-19 outbreak, under section 564(b)(1) of the Act, 21 U.S.C. § 360bbb-3(b)(1) unless the authorization is terminated or revoked sooner. The face mask is intended to be used with single-use inserts. There has not been testing of the effectiveness of the disposable insert when placed in the mask. Accordingly, this product is not a respiratory protective device, nor a substitute for filtering face piece respirators or for surgical face masks. This product is not for medical use or for use in a high infection risk clinical setting. It is not intended to be used to provide liquid barrier protection or for high-risk aerosol generating procedures.

Features of the dual-layer face cover include:

- Adjustable ear straps
- Flexible noseclip
- Breathable outer layer
- Protective inserts*
- Durable structure

HONEYWELL THERMOREBELLION™

Honeywell ThermoRebellion™ detects elevated skin temperature in single individuals. The device's non-contact nature also mitigates risk of cross-contamination. A thermal image of the individual is used to determine skin temperature by focusing on facial features such as the inner canthi of the eye.

This detection system can be deployed at the entryway of a factory, airport, distribution center, stadium or other commercial buildings to identify whether personnel exhibit an elevated skin temperature. Once identified, a secondary screening process can be administered to those whose temperature exceeds the operator's threshold.

SAFETY PACK

Our Safety Pack gives you the personal protective equipment your employees and customers need in a day-to-day setting. Ideal for visitors or on-the-go use, these are an effective tool for protecting everyone from your warehouse to your executive offices.

Additionally, Honeywell Safety Packs are co-brandable, with the ability to put your stamp on each one with your own logo, colors and branding.

Each safety pack includes the following:

- 1 Face Mask
- 1 Pair of Gloves
- 2 Wipes

DISPOSABLE FACE SHIELD

For a wide range of workers, face shields provide an extra layer of protection, and it's essential to ensure a high-quality, comfortable face shield that can perform in any workplace.

Our Disposable Face Shields are FDA registered and have been tested according to industrial PPE regulations for droplet face shields.

Features of the disposable face shield include:

- Large coverage
- Adjustable elastic band
- 1.2" foam thickness
- Anti-fog coating

ANTI-MICROBIAL PROTECTED EARPLUG DISPENSER

The equipment your warehouse staff wears every day is essential.

Honeywell's earplug dispensers are treated with an antimicrobial additive that make them 99.9% cleaner than untreated surfaces. The turn knob and catch tray on the dispenser are shared surfaces and they are both are treated with the additive that reduces the ability of microorganisms such as virus, bacteria, and fungus to live on the surface.
