HONEYWELL VOICEDIRECT™
ERP FOR SAP

Bringing Voice-directed Workflows to SAP, WM and EWM Distribution Centers

Honeywell

PURPOSELY BUILT
TO MEET E-COMMERCE DEMANDS

Distribution center (DC) operators face ever-increasing demands for productivity and accuracy. With average error reductions of up to 25% and productivity increases of up to 35%, Honeywell Voice was purposely built to meet — and exceed — DC fulfillment challenges.

OVERCOME YOUR CRITICAL BUSINESS CHALLENGES

Honeywell VoiceDirect™ is designed to reduce the cost and complexity of SAP voice implementations while meeting the needs of leading warehouse management (WM) and extended warehouse management (EWM) systems. From addressing and improving your company's security protocols to delivering optimal productivity and accuracy gains, Honeywell VoiceDirect overcomes your critical business challenges while seamlessly integrating with your SAP.

FAST, SIMPLE, SECURE AND COMPATIBLE

VoiceDirect ERP for SAP (VDERP) utilizes VoiceAttribute Editor and Honeywell Voice Generator templates that accelerate and simplify implementation. By eliminating error-prone manual coding and reducing per-transaction coding time, you can get your voice-directed workflows up and running in minutes, rather than hours.

VDERP also provides complete secure socket layer (SSL) communications from devices to SAP for a fully secure solution that limits operational risks. As a proven solution in both WM and EWM systems, VDERP ensures compatibility to your specific warehouse management environment.

THE CLEAREST CHOICE FOR VOICE-ENABLED SAP WAREHOUSES

For decades, Honeywell Voice has delivered industry-leading solutions for voice-directed workflows in Europe, the Americas and around the world. When you choose VoiceDirect for your SAP-driven warehouse, you'll experience the benefits of the world's most trusted voice-directed solution.

KEY BENEFITS

- Native SAP experience
- Direct real-time SAP integration
- Compatible with SAP EWM and WM
- Seamlessly integrated into SAP architechture
- Supports standard and custom SAP mobile data entry transactions
