

HONEYWELL NEWHOUSE (UK) MANUFACTURING CAPABILITIES

EUROPE FOR EUROPE MANUFACTURING CAPABILITIES

At the Honeywell Newhouse manufacturing site, we are proud to embody the “Europe for Europe” philosophy, ensuring that our products are manufactured and distributed within Europe to meet the needs of European customers. We specialise in the demanding aerospace and defence industries.

Located in Scotland and only 22 miles (35km) from Glasgow Airport our commitment to local manufacturing not

only enhances efficiency but supports the regional economy and supports sustainability. With over 70 years manufacturing at this site, our workforce is highly skilled, bringing a wealth of knowledge and expertise in our operations. By manufacturing in the region, we support supply chain efficiency through predictable supply, ensuring timely delivery and reliability for our customers.

The Newhouse site boasts advanced manufacturing capabilities that ensure the highest standards of quality and efficiency:

- **Advanced manufacturing technologies** – Our site is equipped with state-of-the-art manufacturing technologies, including assembly lines, precision machining, and advanced quality control systems
- **Full machine shop** – Equipped with state-of-the-art machinery, our full machine shop allows for precision machining and fabrication of complex components
- **Manufacturing engineering** – Our team of manufacturing engineers is dedicated to continuous improvement and innovation, optimizing processes and implementing cutting-edge technologies to stay ahead in the competitive European market
- **Skilled workforce** – We employ a highly skilled and diverse workforce, with expertise in various fields such as engineering, production, and quality assurance
- **Sustainable practices** – We have implemented energy-efficient processes, waste reduction initiatives, and environmentally friendly materials to minimize our ecological footprint
- **Local supply chain** – By sourcing materials and components locally, we reduce lead times and transportation costs, while supporting local suppliers and businesses
- **Customer-centric approach** – We work closely with our customers to meet their specific requirements, providing exceptional value and fostering long-term partnerships
- **Manufacturing excellence** – Our commitment to manufacturing excellence is demonstrated through our various accreditations, including AS9100 (Rev D), UK CAA (Part 21G), ISO 9001, these accreditations reflect our adherence to the highest standards of quality and reliability

Our Newhouse site specializes in the production of high-quality components that are essential for various industries. Key products include:

- **Sealed switches** – Designed for reliability and durability in aerospace/defence applications, our sealed switches are used in demanding environments where protection from dust, moisture, and other contaminants is crucial
- **Proximity sensors** – Our proximity sensors offer precise detection and measurement capabilities, making them ideal for applications in aerospace and defence, automation, safety systems, and more
- **Customized aerospace and defence products** – Tailored to meet the stringent requirements of aerospace and defence applications, our customized products ensure top performance and reliability
- **Limit switches** – Our limit switches provide accurate position detection and are used in various industrial applications to ensure operational safety and efficiency
- **Safety switches** – Designed to protect personnel and equipment, our safety switches are essential components in systems where safety is paramount
