

# **HONEYWELL SMART TALK UNIFIED COMMUNICATIONS ACROSS YOUR ENTIRE DEVICE FLEET**

Seamless, secure communication - on any device.

**Honeywell**

## WHAT IS SMART TALK?

Smart Talk is Honeywell's device-agnostic unified communications platform built for frontline and field teams. It gives workers one app for Push-to-Talk, voice, messaging, urgent alerts, and geolocation—running reliably across your entire fleet, whether that's Honeywell hardware or the employee's own device.

## WHY SMART TALK?

### 1. Connect Every Worker, On Any Device:

- Works across mixed fleets including Honeywell rugged devices and employees' own Android® smartphones
- Designed for BYOD environments where teams bring a variety of hardware
- One app delivers voice, messaging, PTT and safety features consistently, no matter the device

### 2. Strengthen Safety Across Distributed Teams

- Lone Worker Monitoring automatically triggers alerts when a worker stops responding
- Emergency messaging and escalation ensure supervisors can react immediately
- Safety capabilities follow the worker - not the hardware

### 3. Full Fleet Visibility at All Times

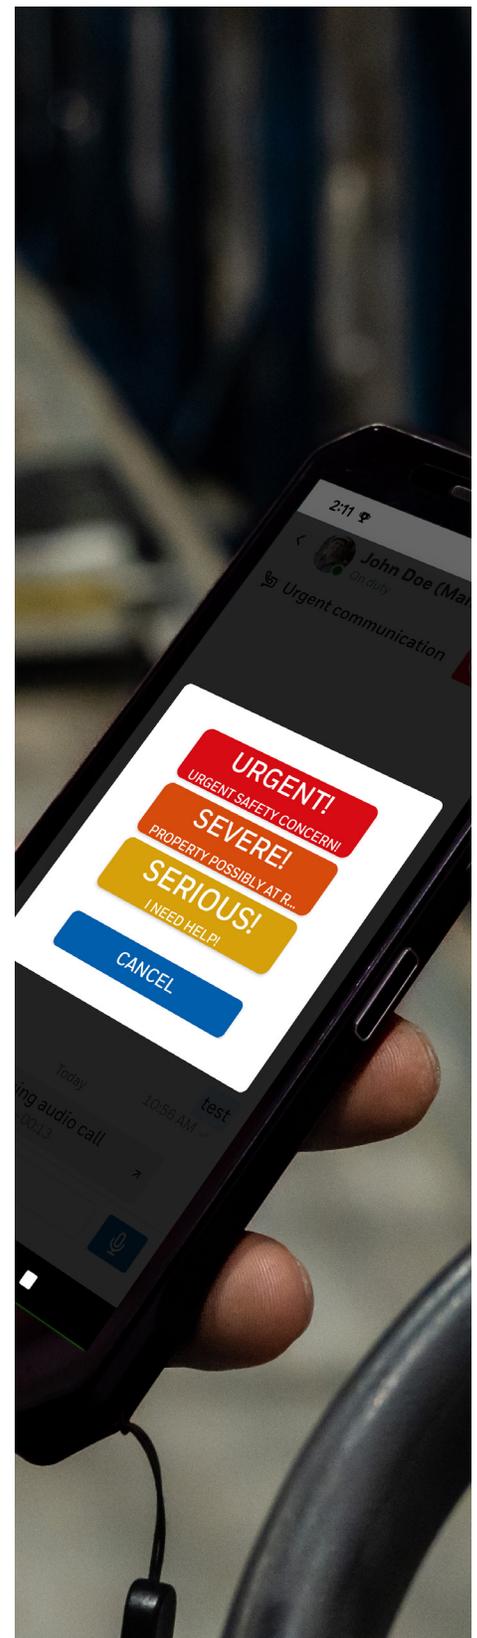

- Real-time geolocation gives managers visibility across all devices in use
- Faster response to incidents when every worker is trackable, regardless of device brand

### 4. Fast Deployment Into Existing IT

- Play-and-play deployment that connects to SIP/PBX systems without requiring hardware standardization
- Perfect for organizations transitioning from radios, desk phones, or mixed mobile fleets

### 5. Built to Scale - Without Hardware Lock-in

- Extensive API ecosystem integrates Smart Talk into workforce tools and operational systems
- Supports OS versions Android 10-15 and iOS, enabling broad compatibility and longevity
- Future-ready flexibility lets customer refresh, diversify, or upgrade hardware without replacing their comms platform

## WHY DEVICE-AGNOSTIC MATTERS

Frontline teams rarely operate on one uniform device type. Many use a combination of enterprise-rugged devices, consumer-grade phones, or whatever is already available. Smart Talk removes the friction:

- No need to standardize devices before rolling out communication tools
- No dependence on one hardware vendor
- Consistent experience across the entire fleet - owned, company-issued, or BYOD

This adaptability is especially valuable in rail, warehouse, logistics, field service, and healthcare where large, distributed teams rely on a blend of devices.

## THE HONEYWELL SOFTWARE ECOSYSTEM

Smart Talk integrates with other Honeywell software—SwiftDecoder(tm), Smart Pay, HEM, and Operational Intelligence—to create a single, intelligent software layer running smoothly across mixed hardware environments.

## DEPLOY UNIFIED COMMUNICATION ACROSS YOUR ENTIRE FLEET - WITHOUT CHANGING YOUR HARDWARE.

Honeywell Smart Talk gives frontline teams a consistent, secure, and scalable way to stay connected, whether they're using Honeywell devices or their own.
